## **DETAILED ACTION**

## Election/Restrictions

- 1. Applicant's election of group I in the paper of 09/26/2007 is noted. The examiner emailed 'mark\_f@friedpat.com' with the notice that claims 18, 19 were inadvertently grouped with group I and should have been grouped with group II due to the combustion chamber compressor. However, as applicant did not timely respond to the revised restriction requirement, hence, the following revised restriction requirement is imposed.
- 2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to an engine with a rotating assembly including a primary compressor, an inner casing and a compressor-driving nozzle wheel and a substantially annular flame holder.

Group II, claim(s) 10-12, 18, 19 drawn to an engine with a combustion chamber configured to counteract axial backflow and combustion chamber compressor.

Group III, claim(s) 13, drawn to a method of reducing NOx emissions by mixing a combustible mixture including exhaust gas and burning the mixture.

Group IV, claim(s) 14-17, drawn to a method of cooling a blade.

Application/Control Number: 10/518,767

Art Unit: 3746

Group V, claim(s) 20, drawn to an engine with blades that define a plurality of nozzles, each nozzle having a convergent-divergent shape.

Group VI, claim(s) 21-22, drawn to an engine which lacks stator guide vanes between the wheels.

Group VII, claim(s) 23, drawn to an engine where at least one of the primary compressor and nozzle wheel is partly blocked.

The inventions listed as Groups I-VII do not relate to a single general inventive 3. concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is distinct from the other groups because it claims the substantially annular flame holder - which the other groups do not. Group II is distinct from the other groups because it addresses axial backflow in the combustion chamber or a combustion chamber compressor - which the other groups do not. Also, there is no requirement of a rotating assembly or nozzle. Group III is distinct from the other groups as it deals with a method of reducing NOx emissions by mixing a combustible mixture including exhaust gas and burning the mixture - the other groups do not deal with exhaust gas and the engine could be any type of engine and there are no rotating elements. Group IV is distinct as it deals with cooling the blades - which the other groups do not address. Group V is distinct as it deals with the blades that define a plurality of nozzles, each nozzle having a convergent-divergent shape -- which the other groups do not address. Group VI is distinct as it deals with an engine which lacks stator guide vanes between the wheels -- which the other groups do

Application/Control Number: 10/518,767

Art Unit: 3746

not. Group VII is distinct as it deals with an engine where at least one of the primary compressor and nozzle wheel is partly blocked -- which the other groups do not.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

## Contact Information

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Ted Kim whose telephone number is 571-272-4829. The Examiner can be reached on regular business hours before 5:00 pm, Monday to Thursday and every other Friday.

Application/Control Number: 10/518,767

Art Unit: 3746

The fax number for the organization where this application is assigned is 571-273-8300.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ehud Gartenberg, can be reached at 571-272-4828. Alternate inquiries to Technology Center 3700 can be made via 571-272-3700.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). General inquiries can also be directed to the Patents Assistance Center whose telephone number is 800-786-9199. Furthermore, a variety of online resources are available at <a href="http://www.uspto.gov/main/patents.htm">http://www.uspto.gov/main/patents.htm</a>
